

EFRAIN VERGARA

Senior Mobile SDET / QA Automation Engineer

Bogota, Colombia | efrainvergara.udec@gmail.com | +57 310 247 6957 | linkedin.com/in/efrain-vergara

PROFESSIONAL SUMMARY

Senior Mobile SDET / QA Automation Engineer with 7 years of experience in QA, test automation, mobile testing, web testing, and API validation. Specialized in iOS and Android automation using Appium, WebdriverIO, Java, JavaScript, and TypeScript. Experienced in mobile release readiness, CI/CD failure analysis, API/UI issue investigation, regression strategy, and seamless collaboration across cross-functional DevOps and product teams. Proven track record of leveraging AI productivity tools (ChatGPT, GitHub Copilot) to accelerate test design, strategy, and framework documentation.

CORE SKILLS

Mobile Testing: iOS, Android, Appium, WebdriverIO, Detox, Espresso, UiAutomator, XCTest, device compatibility, and OS version coverage.

Automation Frameworks: Screen/Page Object Model, Selenium, Cypress, Playwright, Serenity BDD, Rest Assured, Cucumber, and Gherkin.

Programming Languages: Java, TypeScript, JavaScript, Python, SQL, and PHP.

API & Backend Validation: Postman, REST APIs, Requests, Rest Assured, authentication flows, response validation, and API/UI data consistency.

CI/CD & DevOps: Jenkins, AWS Device Farm, GitHub, GitLab, Bitbucket, Docker, Maven, Gradle, and SonarQube.

QA Processes & Tools: Test plans, release readiness, regression, exploratory testing, bug triage, TestRail, Jira, ClickUp, and Monday.com.

AI for QA: ChatGPT, GitHub Copilot, Codex, AI-assisted test scenarios, prompt engineering, and automated documentation workflows.

PROFESSIONAL EXPERIENCE

QA Automation Engineer / Mobile SDET | Unosquare (Client: Frontdoor)

Jan 2023 – Present

- Lead mobile quality activities for iOS and Android applications, covering manual testing, automated regression, exploratory testing, and release validation.
- Maintain and evolve mobile automation frameworks using Appium, WebdriverIO, Java, JavaScript, and TypeScript for critical user journeys.
- Create release test plans, define automation candidates, execute test cycles, and track metrics (passed, failed, blocked scenarios) for production readiness.
- Review CI/CD pipeline reports, investigate automation failures, and pinpoint root causes across environments, device farms, APIs, or test data.
- Validate complex mobile flows including authentication, registration, payments, video chat, and post-service feedback synchronization between mobile and web platforms.
- Perform API validation using Postman and proxy/debugging tools to isolate performance or stability bottlenecks affecting mobile clients.
- Coordinate bug triages with developers and product owners, communicating risk and business impact to drive hotfix and release decisions.

- Integrate AI tools (ChatGPT, Copilot, Codex) to streamline test case generation, test plan drafts, and technical framework documentation.

Tools & Tech: Appium, WebdriverIO, Java, TypeScript, JavaScript, Selenium, Cypress, Playwright, Jenkins, AWS Device Farm, TestRail, Jira, Postman, Maven, Git

QA Automation Engineer | Houm

Apr 2022 – Nov 2022

- Executed manual and automated functional tests aligned with agile sprint goals for mobile and backend services.
- Built API automation suites using Python and Requests to validate backend behavior and service integrity.
- Defined behavior-driven test scenarios with Gherkin and automated mobile flows using WebdriverIO and Appium.
- Supported quality validation for high-impact real estate workflows, focusing on user experience and business-critical paths.

Tools & Tech: Python, Appium, WebdriverIO, Requests, Gherkin, Cucumber, ClickUp

QA Engineer | Michael Page / Stefanini - Aval Digital Labs

Jul 2020 – Apr 2022

- Developed automation frameworks for financial services using Serenity BDD, Screenplay Pattern, and Rest Assured.
- Planned and executed test coverage for web and mobile banking applications, providing critical regression and UAT support.
- Maintained core automation suites, supported production deployment validations, and managed full defect traceability within Jira and TestRail.

Tools & Tech: Java, Serenity BDD, Screenplay Pattern, Rest Assured, Jira, TestRail, Git, Jenkins, Android/iOS devices

QA Automation Engineer | Simetrik Inc.

Jan 2020 – Jul 2020

- Conducted exploratory and functional testing for business workflows and documented defects using Monday.com.
- Automated front-end web scenarios using Selenium and behavior-driven scenarios with Gherkin/Cucumber.
- Validated service layers and backend test suites using Postman.

Tools & Tech: Selenium, Postman, Cucumber, Gherkin, Monday.com, JavaScript

QA Automation Engineer | Append Group

Aug 2019 – Dec 2019

- Automated banking platform processes and backend features using Python and Django.
- Created automated test suites for educational web platforms using Laravel and PHPUnit.
- Performed functional validation and built reusable, modular test components.

Tools & Tech: Python, Django, PHP, Laravel, Postman, Manual Testing

QA Automation Engineer | Seven4N

Dec 2017 – Aug 2019

- Developed E2E test cases for high-traffic e-commerce, airline, and banking platforms.
- Built robust test automation suites using Selenium, Protractor, and Selenide.
- Performed mobile automation using mobile-native drivers: Espresso, Detox, UiAutomator, and XCTest.
- Executed performance and load testing using JMeter and Gatling for backend stress scenarios.
- Actively participated in agile ceremonies, including sprint planning, daily stand-ups, and retrospectives.

Tools & Tech: Java, Protractor, Selenide, Espresso, Detox, UiAutomator, XCTest, JMeter, Gatling

| SELECTED PROJECTS

SDET Interview Practice AI (Personal Project)

2026

- Designed and built an AI-assisted web platform tailored to help SDET and QA Automation candidates practice technical interviews.
- Implemented intelligent workflows to generate role-based interview questions, evaluate responses, and generate detailed final reports featuring scores, strengths, and missed topics.
- Integrated a localized LLM workflow using Ollama with structured prompt engineering for evaluation and real-time feedback loop generation.
- Defined a full-stack quality strategy including unit tests, API/integration tests, and E2E testing backed by deterministic mock providers.

Tools & Tech: Next.js, TypeScript, Tailwind CSS, Ollama, AI Prompts, QA Strategy, Vitest, Playwright

| EDUCATION

MSc in Software Engineering – International University of La Rioja (UNIR)

Jan 2022 - Jan 2024

BSc in Systems Engineering – University of Cundinamarca

Jan 2014 - Dec 2018

| LANGUAGES

Spanish: Native | English: B1+/B2 - Professional working proficiency in technical and international team contexts
